The Wireless control for your chimney fan

*Pure pleasure with fireplace and stove
Warmth and Well-being at
Your Command*

EXHAUSTO

FOR A BETTER FLOW

Sheer Pleasure

Lean back, put your feet up and simply enjoy the pleasant, natural warmth from your fireplace or wood-burning stove.

That's all there is to it, thanks to efficient extraction and wireless control through the EXHAUSTO EW40. This unique, complete solution ensures that you make the very most of your fireplace or wood-burning stove – and of the fuel you use.

The combination of efficient extraction and easy, reliable control of the chimney draught makes your fireplace or woodburning stove a clean and uncomplicated source of heat. You get all the benefits – such as a healthier, more pleasant indoor climate - without drawbacks such as smoky rooms...

It is basically all about using the potential of the chimney to the fullest extent - about getting rid of smoke and ash while ensuring the best possible airflow to optimise combustion.

Look forward to pleasant evenings in front of your fireplace or wood-burning stove - with warmth and well-being at your command. We do.

Let a sensor give you a little extra

The EW40 is also available with a temperature sensor. This gives you access to a range of other functions and options that not only help to improve the indoor climate, but also increase security.

These features include:

- alarm functions and improved safety (chimney fire alerts, for example)
- an automatic temperature sensor-controlled system to ensure that the chimney fan is switched on at the right time to reduce heat loss from the fire
- a special function that tells you when it is time to add more fuel

Wireless and simple installation

The wireless control for the chimney fan is not only easy to fit in to your existing surroundings, it is also easy and inexpensive for you to install. The fan is simply fitted to the chimney and linked to the power unit using a pre-fitted supply cable that eliminates the need for professional assistance.

The wireless control unit itself is both elegant and discreet, so you can position it almost anywhere. If it has to operate over a long distance, you can fit a repeater to boost the signal.

So fitting the wireless control will not mean having to rearrange your home.

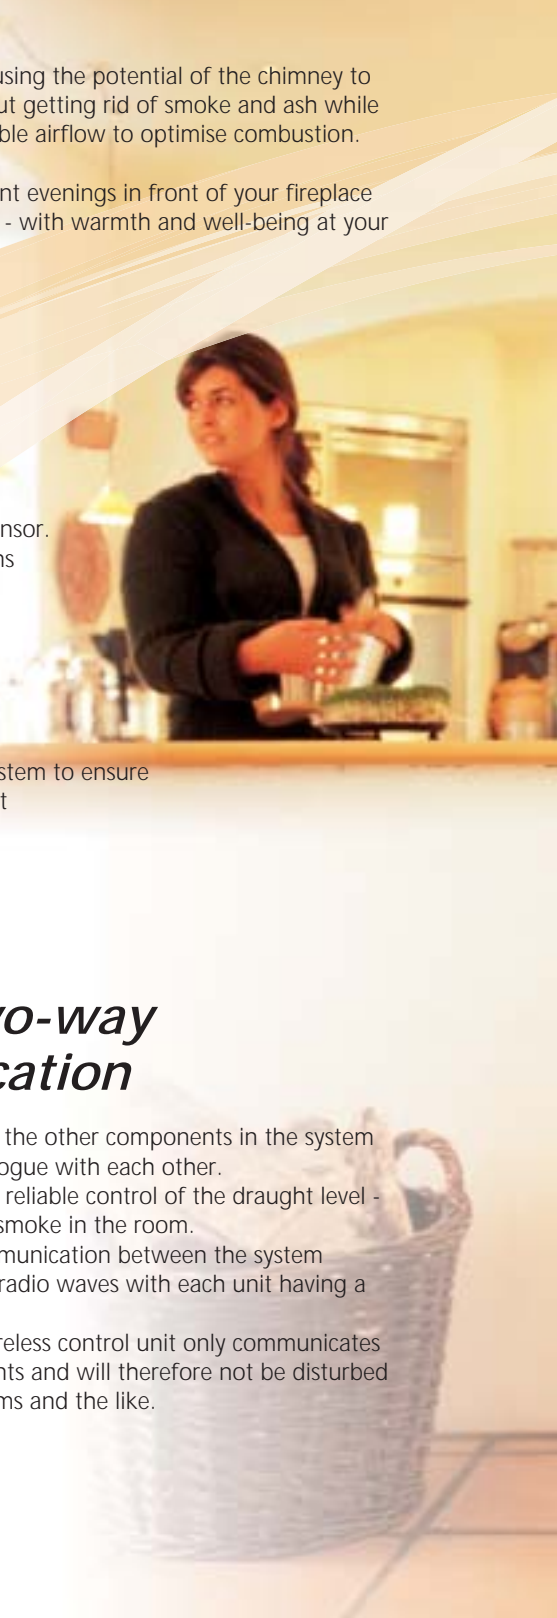

Secure two-way communication

The operating unit and the other components in the system remain in constant dialogue with each other.

This means precise and reliable control of the draught level - and no problems with smoke in the room.

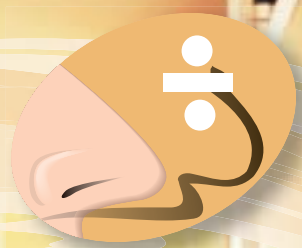

At the same time, communication between the system components runs over radio waves with each unit having a unique identity.

This means that the wireless control unit only communicates with familiar components and will therefore not be disturbed by doorbells, baby alarms and the like.

Quick and easy lighting

No smoke or odours in the room

Less dust and soot

Better combustion and fuel economy

A better, healthier indoor climate

Extra ventilation

EXHAUSTO

- Innovation and ventilation

The EW40 – the wireless control system from EXHAUSTO – and a chimney fan to optimise the performance of your chimney make up a unique solution that helps you make the very best of your fireplace or wood-burning stove.

For example, the solution provides you with a better, healthier indoor climate and improved fuel economy. It also does away with the problem of smoky rooms.

EXHAUSTO has been an innovative market leader in the field of combustion gas extraction for more than 40 years.

The EW40 and our chimney fans are therefore built on the foundations of extensive experience in the areas of smoke extraction and domestic ventilation.

We apply our knowledge to fulfil our overriding goal: to create a better indoor climate and greater well-being at home, at work, in school, in offices or wherever else we may be.

The solution consists of only a few components, which are easy to install without professional assistance.

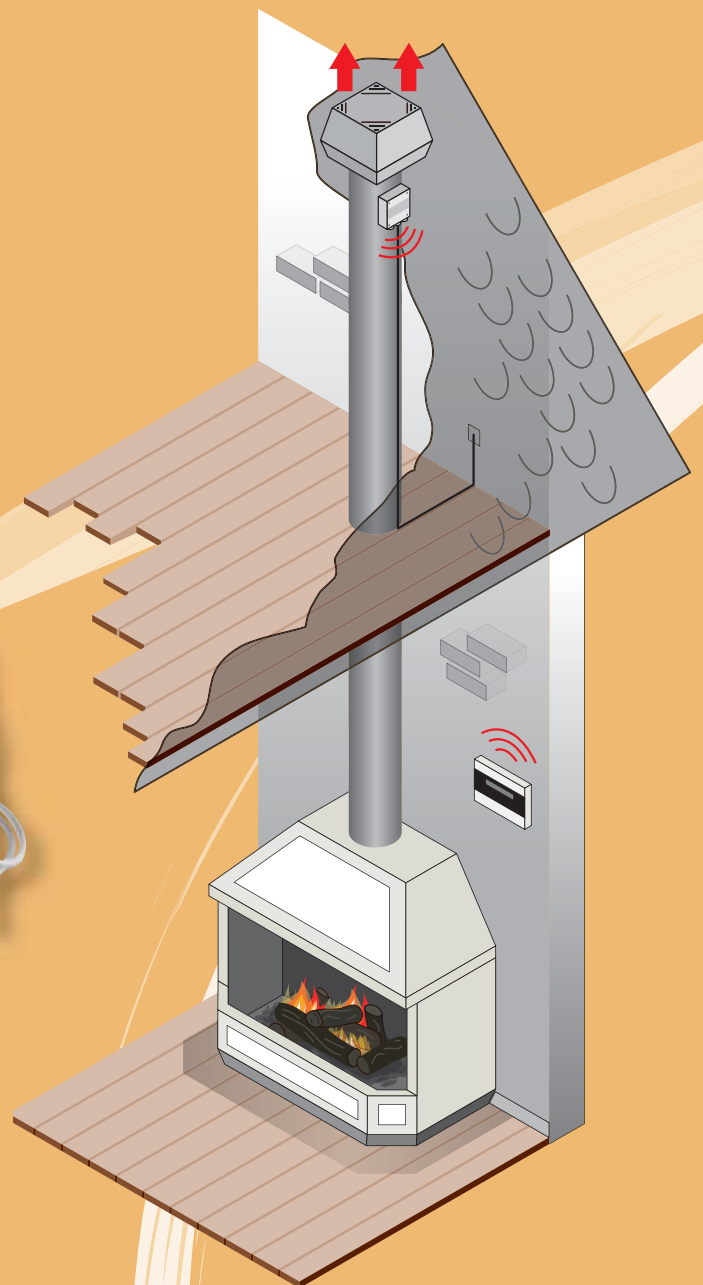

The standard solution consists of:

- The chimney fan
- The EW40 Power Unit
- The EW40 Control Panel

Accessories

- Temperature sensor
- Repeater units
- Mains adapter
